

MEMORANDUM

TO: Management

FROM: Customer Analytics

DATE: 21 June 2026

SUBJECT: Revenue Opportunity: Targeted Win-Back Campaign for At-Risk Customers

SUMMARY

This analysis identifies a high-impact opportunity to recover £842k in at-risk revenue through a targeted win-back campaign. 346 previously-valuable customers have gone silent, despite representing 10% of historical spend. Early intervention can preserve revenue and improve retention efficiency.

KEY FINDINGS

1. Revenue is highly concentrated among a small customer base.

Champions represent 26% of customers but drive 66% of revenue (£5.8M). The top two segments (Champions + Loyal) are 45% of the customer base but account for 82% of revenue. This concentration indicates strong product-market fit among a core user base, but also suggests vulnerability to churn among high-value customers.

2. A significant revenue pool is at immediate risk of permanent loss.

346 customers in the "At-Risk" segment hold £842k in historical revenue but have not purchased in 60+ days. These are customers with demonstrated, significant spending power who have simply gone quiet. The longer they remain inactive, the lower the probability of recovery. Immediate outreach is critical.

3. Business fundamentals are strengthening, but depend on sustained customer engagement.

Monthly repeat purchase rate climbed from 29% in December 2010 to 93% by December 2011, indicating strong product retention and reduced churn pressure. This upward trend validates the core product value. However, protecting this gain requires proactive engagement with at-risk customers before they attrition permanently.

RECOMMENDATION

Launch a targeted win-back campaign for the 346 at-risk customers within the next 30 days. The campaign should emphasize product improvements, exclusive offers, or personalized outreach based on their purchase history. Estimated recovery rate of 20-25% would recapture £168-210k in revenue while reinforcing customer-first positioning.
